

#### PROBLEM STATEMENT:

Gas leakage is an important aspect to be noted as it can major damage when ignored. It is important to raise an intimation when the gas leakage surpasses certain threshold values. Surveys state that in the oil and gas industry, gas leakage problems occur frequently and lack of proper intimation at those situations leads to hazard. IoT can be utilized for efficient and easy monitoring of gas leakages on a continuous basis and from any distance.

#### PROBLEM

GAS LEAKAGE MONITORING AND ALERTING SYSTEM FOR INDUSTRIES

Brainstorm

Methodology proposed.

10 minutes

## TEAM LEADER:IMRANUL FAREED.M

Data collected from appropriate sensors.

Microcontrol continuously monitors the

data.

### TEAM MEMBER:GOKULNATH.M

On reaching a certain threshold value, an intimation is given.

When leakage is sensed, an alert is given through LCD and buzzer.

## TEAM MEMBER:GOKUL.S

The system comprises of a Wi-Fi module which is responsible to intimate the gas status

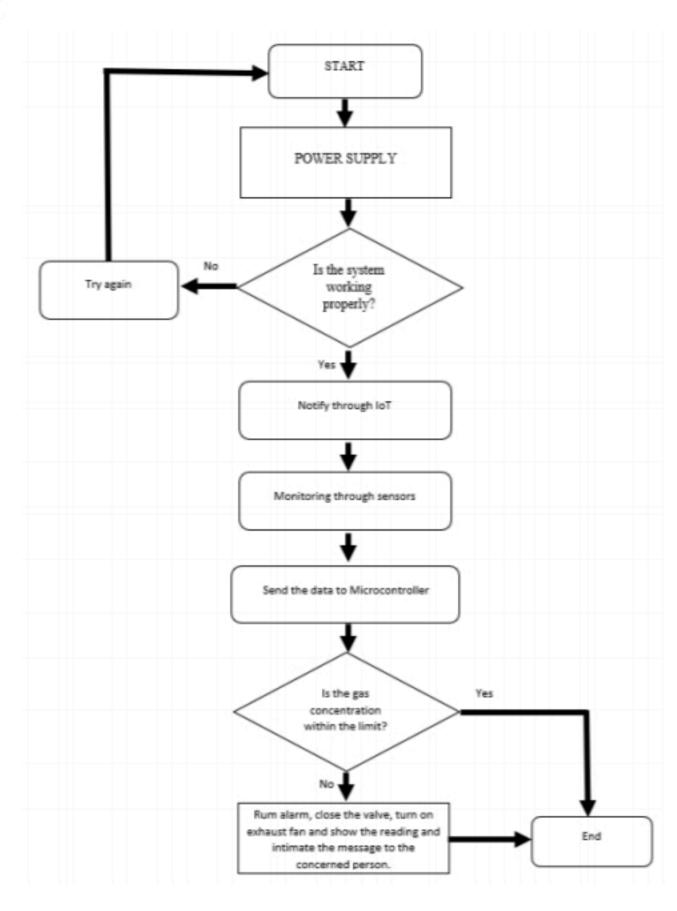

If leakage is detected the alarm beeps and the exhaust fan turns on.

# TEAM MEMBER: GOPINATH.G

Simultaneously the valve closes and the leakage alert is displayed on LCD and sent to the concerned person

Once the gas level subsides, the gas valve opens and the regular process takes place.
